

How people move through Roster

Every screen in the app, taken from the running build with the demo accounts, and the actions that move people between them.

→ Goes to a new page - - -> Opens a sheet or dialog over the page - - -> Needs sign-in first

JOB SEEKER

From a search to an offer

1. **Sign up** as someone looking for work and fill in the **profile**.
2. **Search** with skill, salary, setup and radius filters, in list, split or map view.
3. Open a role in the **job sheet** to see which of its skills you already have.
4. Add promising roles to the **shortlist** and compare them side by side.
5. Apply to all of them at once, then follow each one on **Applications**.

RECRUITER

From a posting to a hire

1. **Sign up** as hiring and complete the **recruiter profile**.
2. **Post a role** with its range, required skills and office address.
3. Find people on **Candidates**, ranked by overlap with the role's skills.
4. Watch applicants arrive in the **pipeline**.
5. Review each one in the **candidate sheet**, message them, and advance their stage.

EVERYWHERE

Always available

- The header tabs switch between a role's main pages at any time.
- The avatar menu opens the profile, **account settings**, and sign out, which returns to the **landing page**.
- Any signed-in page visited while signed out redirects to **Sign in** and comes back afterwards.
- A job or a candidate profile can be reported from its sheet; admins review reports in Django admin.
